

# Product Overview

Precision. No company exemplifies this concept better than AVM, and this overarching philosophy is imbued in everything they create -- from streamers to monoblocks to all-in-one systems. Ask to hear one today!

Audiophile technology has come a long way, and AVM's all-in-one defy popular preconceptions by applying leading-edge technology and engineering to deliver systems with exceptional musical reproduction capabilities.

AVM's all-in-ones appeal to both hardcore audiophiles (who may be looking to downsize and move to something more manageable without unduly compromising the audio experience of their "trophy" systems), and modern urban dwellers living in smaller spaces, who still want and appreciate wonderful sound.

## All-In-One Streaming Receivers

An Entire Hi-Fi System in One Component!

Three models, 100, 200 or 250 watts. X-STREAM HiRes Engine: Apple AirPlay 2, Spotify® Connect, Roon Ready, TIDAL, QOBUZ, UPnP, Internet Radio, Multiroom & Party Sync Mode, HiFi Bluetooth, Quad DAC 384kHz/32bit, DSD128, Slot-In Pure CD Drive, Class-A headphone amplifier. Convenient control via RC X App for iOS & Android. Optional RC 9 remote control with color display.

## Media Streaming Players

Media Streaming Players are identical to the All-In-Ones but without the amplification. Dedicated CD only players are also available. Upsampling is standard in AVM players ensuring state-of-the-art sound quality from all your digital sources.

## Integrated Amplifiers

Three models from 100 to 200 watts. Up to 5 line inputs plus phono, DAC and Bluetooth. Class-A headphone amp with front-mounted jack. Easy to use soft buttons allow individual configuration and naming of inputs. Enormous power reserves to drive difficult loudspeakers with ease. Theater applications supported with pass through, trigger and connections for two pairs of speakers and sub. Tube line stage for incredibly natural sound.
