TOWNUS HIGHLIGHTS

CANTON

01

MODERN DESIGN

The name Townus is a play on words from Taunus and Town and connects the modern city dweller with the origin of the loudspeaker and the rural nature of Canton. The elegant and timeless shape with rounded edges, paired with high-quality technical components, make the new Townus speakers a series that can be used flexibly.

02

HIGH-QUALITY SURFACES

The modernly designed and yet timeless elegant Townus loudspeaker series harmonises with many interior styles thanks to the various cabinet finishes available. Immaculately crafted cabinets in white silk matt and black high-gloss lacquer as well as fine walnut real wood veneers underline the premium claim of the new Townus series.

03

NEW GOLD-PLATED TERMINALS

The high-quality gold-plated screw terminals with a receptacle for cable cross-sections up to 10 mm² offer maximum conductivity and guarantee long-term stable contact. The connection terminal, which is flush with the rear wall, provides a uniform appearance and is equipped with high-quality components.

04

MAGNETIC OVALS FABRIC COVER

The high-quality and acoustically neutral fabric covers in black adhere conveniently to the baffle via magnet and conceal the direct view of the technology when required. The oval covers nestle discreetly on the baffles and, with the new design, provide a calm and at the same time dynamic appearance.

05

FLEXIBLE SPEAKERS FOR THE HOME CINEMA

The wide range of home cinema components allows you to flexibly combine the Townus series with each other and add further speakers. For example, our Dolby Atmos speakers and powerful active subwoofers transform your Townus models into a top-class home cinema system with effective 3D surround sound.

06

POWERFUL SUBWOOFER

For enormous bass response and maximum bass dynamics, the Townus Sub 12 active front-firing subwoofer is complemented by the speakers of the Townus series - perfectly matched to the acoustics and technology of the models. The high power amplifier output and the 300 mm subwoofer chassis made of titanium as well as the downfire passive cone enable excellent bass performance.
